Date: 25 February, 2022

Venue: B 517

EESA Council organized a session on 21st Century Qualities of Engineers-Road Ahead- by Prof Milind Marathe on 25th February 2022 at 4:30 pm. The session began with Sanika Pandit, General Secretary of EESA introducing the Professor along with his few achievements.

Professor then started the session by first mentioning why he wanted to conduct this session in the first place. He then continued by talking about the Industry 4 point revolution and explained the impact, disadvantages and progress and the constant craving of wanting to have more of every revolution.

He explained how the business models are changing fast. He then moved on to how the qualities of 21st Century engineering are different; every 5 years the change in the industry. He then put forth the rhetorical question that is the change in syllabus equivalent to the change in the industry? Students should be taught how to learn, assimilate and deliver the output of a particular model. He said that you have to decide your price.

He quoted” Multidimensional personality development is needed.” According to him, the following points should be jotted down by every student: 1. Be an expert in some subjects 2. One should learn all types of communication. 3. Having entrepreneurial qualities is equally important. 4. Do internships and extra projects for placement.

He then talked about concentrating on traversal qualities in every individual. These include dealing with people, cooperating with them, the buzzword “multitasking” and Higher Order Thinking capability. He then conveyed his final message of being clear with what you want.
